

From feedstock to final clients, **Açu** is the integrating hub to the e-Fuel value chain

Conceptual
configuration

e-Methanol Production

315 k *ton/year*

Expected operation start in
2027

Electrolyser capacity up to

3.7 GW
electrolysers

Low Carbon H₂ Production

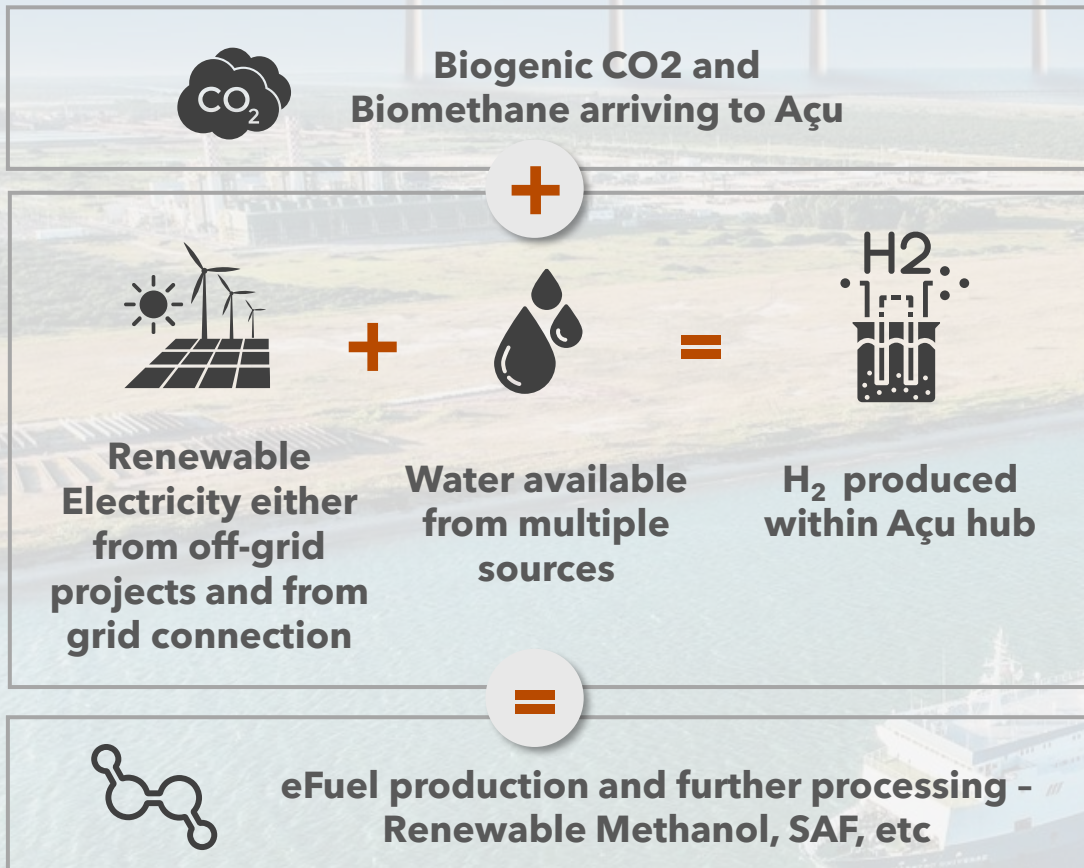

605 k *ton/year*

Açu is the platform for eFuels production and trading, with resources and infrastructure available on site

QR Code:

AÇU ON-SITE SUPPLY AND FEEDSTOCK

OPTIMIZED LOGISTICS AND INFRASTRUCTURE

- Infrastructure to **store and blend e-fuels** to other products
- Access to **domestic markets through cabotage and road access**
- **Deepwater export infrastructure** to reach overseas markets

CONNECTION ON SITE WITH POTENTIAL OFFTAKERS

- Growing demand from trucks, buses and vessels circulating port facilities
- **Industrial clients** can **replace fossil fuels for e-fuels**, giving optionality to their energy supply with cleaner sources
